$$ax^2 + bx + c$$

$$\frac{x}{a} + \frac{y}{b} = 1$$

Let's learn!

ORDERING NUMBERS

$$V = \frac{4}{3}\pi r^3$$

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

THE ANIMALS ARE RACING!

The smallest animal is in the first position. The tallest animal is in the last position. The animals are running in an ascending order or increasing order.

ASCENDING ORDER

To write numbers in ascending order, we arrange them from smallest to biggest.

5 is the smallest number. It is in the first position.

36 is the biggest number. It is in the last position.

We write the number in the increasing order as follows:

5

12

23

36

DESCENDING ORDER

To write numbers in descending order, we arrange them from biggest to smallest.

36 is the biggest number. It is in the first position.

5 is the smallest number. It is in the last position.

We write the numbers in the decreasing order as follows:

36

23

12

5

COMPARING NUMBERS

Do you know how to compare numbers?

When we compare two numbers, the number that has the biggest number of digits is the bigger number. When compare two numbers with the same number of digits, we begin by looking at the place value farthest to the left and compare its digit in each number.

Look at the chart below. Recall the ascending and descending orders.

Ascending Order	Numbers	Descending Order
	32	
	25	
	18	
	12	
	7	
	3	

LET'S TRY!

PROBLEM 1:

Four friends are collecting shells at the beach. Tom has 18 shells, Mia has 7 shells, Sam has 25 shells, and Lily has 12 shells. Can you line them up from the friend with the fewest shells to the friend with the most shells?

7

12

18

25

PROBLEM 2:

Here are 6 numbers: 14, 5, 22, 8, 19, 11. First, put them in ascending order. Then, put them in descending order.

SOLUTIONS

ANSWER

Mia (7) → Lily (12) → Tom (18) → Sam (25)

ANSWER

Ascending (small → big): 5, 8, 11, 14, 19, 22

Descending (big → small): 22, 19, 14, 11, 8, 5

$$ax^2 + bx + c$$

$$\frac{x}{a} + \frac{y}{b} = 1$$

$$V = \frac{4}{3}\pi r^3$$

Bye!

THANK YOU FOR LISTENING!

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$
