

GRADE 3

MEASUREMENT

DEFINITION

We measure many things using a variety of tools. We can measure length, volume, capacity, area, time and temperature. Here are some tools we use to help us measure:

WATCH

Watches measure
duration and time.

MEASURING CUPS

Measuring cups
measure quantities
needed when
baking or cooking.

MEASURING TAPE

A measuring tape
measures length:
how wide, high or
deep something is.

PROTRACTOR

A protractor measures angles and is used when building and constructing.

RULER

Rulers are used to measure length in millimeters, centimeters and meters.

KITCHEN SCALES

Kitchen scales
measure the
weight of food.

MEASURING SPOON

A measuring spoon measures the quantity of ingredients when cooking.

THERMOMETER

A thermometer measures heat: how warm or cool something is.

TAPE MEASURE

A measuring tape is a retractable ruler that measures in millimeters, centimeters and metres.

Units of Length

mm

Millimetres are used to measure very small objects

2mm

15 mm

cm

Centimetres are used to measure small to medium sized objects

15cm

80 cm

Units of Length

m

Metres are used to measure large objects and short distances

10m

100 m

km

Kilometres are used to measure long distances

12 000 km

Which Unit?

Which unit of length would you use to measure the size of the following objects?

mm

cm

m

How to estimate the size of different objects:

1. Decide on the unit

Choose the appropriate unit of length: use centimetres for shorter objects and metres for longer ones.

2. Use a reference object

Pick something you know the length of, such as a ruler or the size of your hand.

3. Count how many fit

Roughly count how many times the reference object will fit along the length of the item.

4. Multiply and estimate

Multiply the reference object's length by how many times it fits along the item's length.

How to measure length using a ruler:

1. Place the ruler next to the object.
2. Put the end of the object in line with the "0" on the ruler.
3. Keep the ruler straight and read the measurement at the other end of the object

Have a go at estimating and measuring the length of the following objects using a ruler or measuring tape, include units.

Object	Estimate	Measurement	Units
Pencil			
Paper clip			
Reading book			
Length of desk			

Great job!

Did you measure up to the challenge?
